SUMMARY

Software Engineer with 4+ years of experience designing and shipping backend systems and AI-driven automation for enterprise infrastructure. Built distributed workflow orchestration, NLP-powered intake agents, and governance frameworks on a Java/Spring foundation, paired with Python, Groovy, and ServiceNow integrations. Delivered 7,000+ engineering hours in annual savings across the automation portfolio; recognized with the Q3 2024 Star Award for enterprise-scale impact.

SKILLS

Languages: Java, Python, Groovy, Shell, SQL, Regex

Backend & Frameworks: Spring Boot, Spring Security, REST APIs, Multithreading, Concurrent Systems, Elasticsearch

AI / ML: LLM-based Agents, NLP Document Parsing, Prompt Engineering, AI-driven Monitoring & Validation

Cloud & DevOps: AWS, Docker, Git, GitHub, CI/CD, Linux

Platforms & Tools: ServiceNow, Resolve.io

Concepts: System Design, Workflow Orchestration, Audit & Governance Frameworks, Observability, Compliance Automation

WORK EXPERIENCE

Software Engineer 2 — FIS

Jun 2025 – Present

Pune, India

Tech Stack: Java, Python, Groovy, Shell, ServiceNow, Resolve.io, LLM Agents, NLP

- Led development of a next-generation enterprise automation initiative projected to deliver **4,200+ engineering hours** in annual efficiency gains upon production rollout.
- Built **Intelligent Intake Orchestration** using NLP-driven AI agents that parse unstructured emails and design documents to auto-extract infrastructure requirements, eliminating manual ServiceNow form entry and increasing intake accuracy.
- Engineered an **AI agent** that parses manually executed Phase 1 LB VIP scripts, monitors runs in real time, and detects operational failure patterns — converting a manual workflow into a semi-autonomous monitored process.
- Architected a two-phase **Load Balancer VIP Decommissioning** framework with staged disable/decommission flows and auto-generated primary/secondary scripts, reducing change risk on production VIPs.
- Delivered **Firewall Decommissioning Validation Automation**, a cron-driven governance platform that reconciles ServiceNow change records against firewall state — saving **1,200+ hours annually** while enforcing compliance.
- Standardized auditing and observability frameworks (execution time, success/failure metrics, validation checkpoints, exception traces) across every deployed automation, enabling enterprise-grade traceability.

Software Engineer 1 — FIS

Jul 2023 – Jun 2025

Pune, India

Tech Stack: Groovy, Shell, ServiceNow, GitHub

- Architected **Firewall Decommissioning Automation** orchestrating 500+ end-to-end workflows — dataset processing, request validation, script generation, ServiceNow ticket lifecycle, and execution verification — delivering **3,500+ hours** in annual savings. Awarded the **Q3 2024 Star Award** for technical leadership and enterprise-scale impact.
- Built **SSL Certificate Discovery, Renewal & Load Balancer Mapping Automation** that ingests VIP inputs, traces every load balancer where certificates are deployed, generates renewal and deployment scripts, and uploads finalized outputs to ServiceNow — saving **1,500+ hours annually**.
- Partnered with network, platform, and operations teams to scale automation adoption across multiple enterprise environments, replacing error-prone manual processes with deterministic systems.

IT Trainee — FIS

Jun 2022 – Jul 2023

Pune, India

Tech Stack: Python, Groovy, Shell, Resolve.io, ServiceNow

- Designed and shipped **Router Configuration Scrubbing Automation** that retrieved router configurations, sanitized sensitive data, transformed outputs into operational artifacts, and uploaded them directly to ServiceNow as attachments — generating **900+ hours** in annual savings.
- Expanded scope from backend engineering into enterprise automation, workflow orchestration, and operational tooling across the Python, Groovy, and Shell ecosystems.

Engineering Trainee — Simform · Jan 2022 – Feb 2022 · Ahmedabad, India

Completed intensive backend engineering training in Java multithreading, RESTful APIs (Spring Boot), Spring Security, and Elasticsearch.

EDUCATION

B.Tech, Information Technology — Kalinga Institute of Industrial Technology (KIIT) · 2018 – 2022
