ADITYA MISHRA

Network Platform Automation Engineer | Ansible | ServiceNow | Multi-Vendor Network Automation
+91 96687 64761 | adityamishra2710@gmail.com | GitHub | LinkedIn | LeetCode

SUMMARY

Software Engineer II with 4+ years of experience designing and delivering enterprise network automation across firewall, load balancer, SSL certificate, router configuration, validation, and decommissioning workflows. Built end-to-end automation from SME requirement gathering and HLD/LLD through development, testing, deployment, and production support, saving 13,000+ engineering hours annually. Experienced in Resolve.io-to-Ansible migration, ServiceNow integration, multi-vendor network operations across Juniper/Cisco firewalls and NetScaler/F5 load balancers, API-driven workflows, and operational validation.

WORK EXPERIENCE

SOFTWARE ENGINEER II – FIS

2025 - Present

TECH STACK: Resolve.io, Ansible, ServiceNow, Python, Groovy, JavaScript

- Lead end-to-end design and delivery of enterprise network automation solutions across firewall decommissioning, firewall validation, load balancer VIP decommissioning, backend server decommissioning, SSL certificate renewal, and router configuration workflows, collectively saving 13,000+ engineering hours annually.
- Design HLD/LLD automation architecture by collaborating with network SMEs, platform teams, and operations stakeholders to gather requirements, validate feasibility, define execution logic, document workflows, and align implementation with operational controls.
- Built firewall decommissioning automation for Juniper SRX and Cisco ASA firewalls, saving approximately 3,500-4,000 engineering hours annually by automating rule/object cleanup, validation logic, execution sequencing, and controlled change workflows.
- Developed firewall decommissioning validation automation, saving 2,000+ engineering hours annually by automating post-change verification, compliance checks, execution status validation, and exception reporting for safer production changes.
- Built load balancer VIP decommissioning and validation workflows for Citrix NetScaler and F5, saving 2,000+ engineering hours annually by automating request intake, dependency checks, execution steps, validation, traceability, and reporting.
- Automated load balancer SSL certificate renewal workflows, saving 2,000+ engineering hours annually by streamlining certificate lifecycle activities, validation steps, renewal execution, and operational reporting.
- Migrated major enterprise automation workflows from Resolve.io to Ansible, applying Ansible playbook design, workflow structure, inventory handling, reusable roles/modules, YAML-based configuration, and automation execution patterns.
- Integrated ServiceNow with automation workflows to enable structured request intake, approval-aware processing, execution tracking, real-time status updates, and traceable operational outcomes.
- Developed operator-focused automation interfaces using JavaScript, jQuery, and Ext JS, simplifying complex network workflows into guided execution experiences for operations teams.

SOFTWARE ENGINEER I - FIS – Network Automation, Workflow Engineering

Jul 2023 - Jun 2025

- Developed, maintained, and enhanced enterprise automation for Juniper/Cisco firewall workflows, NetScaler/F5 load balancer operations, SSL certificate renewal, router configuration, and decommissioning use cases.
- Collaborated with network SMEs and operations teams to convert manual change procedures into deterministic automation workflows with defined inputs, validations, execution steps, rollback considerations, and reporting outputs.
- Improved execution reliability and reduced operational risk by standardizing repetitive network tasks, automating validation checks, and replacing manual commanddriven activities with controlled workflow-based automation.
- Built practical understanding of firewall policies, object groups, ACLs, NAT, load balancer VIPs, backend server dependencies, SSL certificate lifecycle, router configuration handling, and enterprise change management.

IT TRAINEE - FIS

Jun 2022 - Jul 2023

- Supported enterprise network operations, automation scripts, production deployments, workflow enhancements, and operational controls.

SKILLS

Skills Network Automation Firewall Decommissioning, Firewall Validation, LB VIP Decommissioning, Backend Server Decommissioning, SSL Certificate Renewal, Router Configuration Automation, Compliance Checks, Change Automation Platforms & Automation Ansible, Resolve.io, ServiceNow, Git, REST APIs, YAML, JSON, SQL Server, PostgreSQL Programming Python, Groovy, Java, Shell Scripting, JavaScript, jQuery, Ext JS, CSS Engineering Requirements Gathering, HLD/LLD Design, Workflow Architecture, Testing, Production Deployment, SME Collaboration, Operational Risk Reduction, Documentation AI / AIOps Exposure LangChain, LangGraph, MCP, RAG, Tool Integration, Agentic Workflow Design, Prompt Engineering

EDUCATION

- B.Tech in Information Technology - KIIT, Bhubaneswar *2018 - 2022*
